

DUAL EVALUATION

(evaluated independently)

Step 1: Answer Selection

→ QA Accuracy

Model selects: **B**

Ground truth: **B** ✓

QA Accuracy = 1 (correct)

Step 2: Grounding Check

→ Temporal IoU (tIoU)

Model Predicts: **4:50 – 6:30**

Ground Truth: **5:29 – 5:42**

tIoU = overlap / union = 0.13

Grounded Accuracy (G-Acc): Correct answer AND tIoU ≥ 0.5

This Example:

Answer Correct? ✓ tIoU = 0.13 < 0.5

→ **G-Acc = 0**
(Correct answer, Poor grounding)

The Grounding Gap:

A model selecting B but predicting [0:00 – 44:29]

→ **QA Acc = 1, but G-Acc = 0**
(Lucky Correct)
